25X1C

[REDACTED] reported that the Cuba Government would launch a V-2 type rocket, supplied by the USSR, at 1130 P.M. on 25 July. The rocket would be launched from a 1200 ft. long launching pad near San Raphael. The [REDACTED] said that the launch would be visible from Santiago and Guantanamo.

25X1C

The location is approximately one hour and thirty minute drive from Santiago, heading into the Sierra Maestra mountains. After passing through the town of Puerto Boniato you reach San Raphael which is an old coffee plantation 50 or 60 miles from Santiago. A good aerial map of the Oriente Province should clearly spot the plantation.

In this area the entire civilian population has been moved out and underground source report that a large crane and construction steel have been shipped to the area, and the crane can be seen in place. The crane is easily

Visible from the air and from
the sea with a good pair of
binoculars.
